

# Renlita Floataway

## Spring-Assisted Tilt-Up Doors

### Operation

'Springaway' operation comprises an ingenious spring assistance system which is adjusted at installation to give an easy lift action, complete with 'anti-slamming' feature.

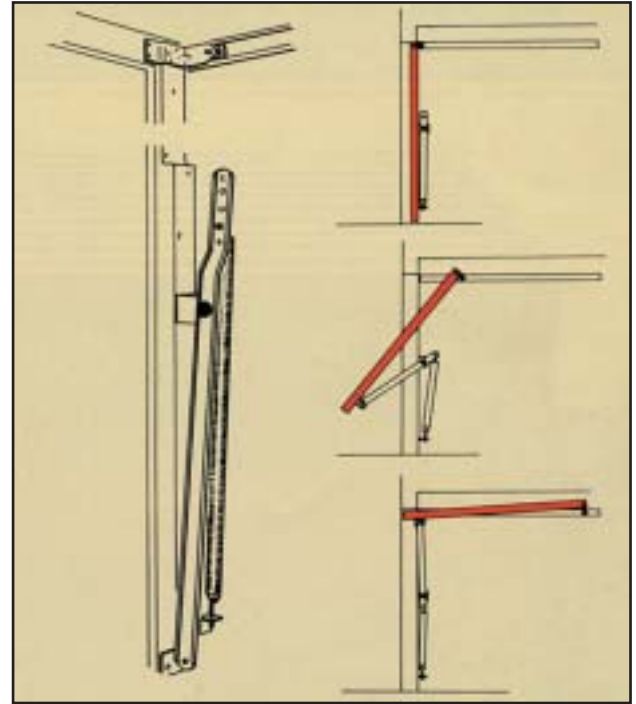

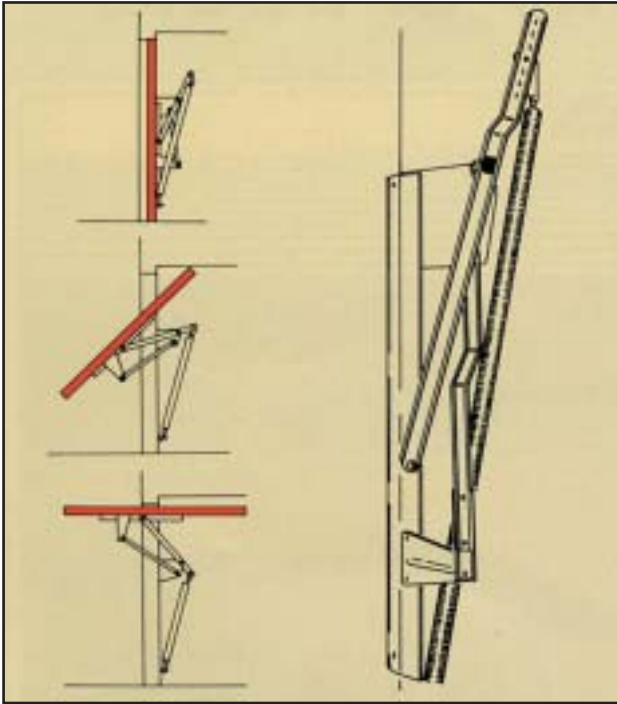

Springaway doors are custom-made for individual requirements and are supplied with a handle-lockset for ease and security. Installation is carried out by factory-trained experts.

### Any available cladding

Standard Springaway doors are clad in steel for strength and durability, but can also be finished in timber, glass, plywood, Colorbond steel or any other available material.

A variety of panels, mouldings and other decorative features can be incorporated to compliment any building style.

Several models of hardware fittings are designed to cover the complete range of residential garage door requirements. Features include roller bearing fittings at the main pivot points, two separate adjustments for door weights and a patented anti-slamming attachment which gives excellent performance.

All hardware comes with easy-to-follow installation instructions (or installation can be arranged by factory trained personnel). Galvanised hardware is available at extra cost, as are matching pre-punched steel door jamba.

Model	Min. Door Height	Max. Door Height	Min. Head Room	Min. Side Clearance
150J	1850 mm	2230 mm	25.4 mm	45 mm
175J	1900	2230	25.4	45
200J	1900	2230	25.4	45

Model	Min. Door Height	Max. Door Height	Min. Head Room	Min. Side Clearance
150T	1880 mm	2180 mm	51 mm	76 mm
250T	1980	2280	65	89
300T	2280	2740	65	89

**Note:**

The maximum height given can be exceeded provided door weight is not excessive. The bottom of the door will project proportional out of opening as height is increased. Maximum width depends on on weight of door.

Some track hardware is available in a modern version which reduces the minimum height of door requirement by 51mm. This is known as 'short power arm' equipment and is available for the 150T and 250T.

Extra-heavy-duty hardware can be supplied to order where door heights and weights exceed the above specifications.
