

Renlita Floataway

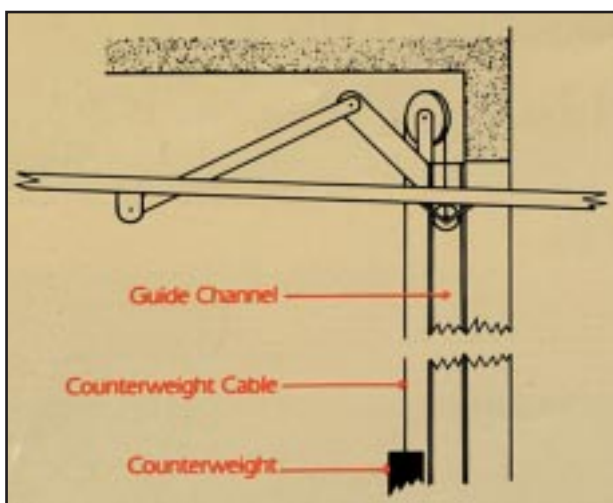

Counterweight Tilt-Up Doors

Custom built

Custom made Renlita Floataway Doors are constructed to fit any opening of most individual garages regardless of size allowing the operation of the door to be smooth and simple.

With computer generated measurements the balance mechanism is matched to the weight of the door so that your Renlita Floataway Door will perform smoothly year after year, silently and to your complete satisfaction.

Multi cladding finish

The standard Renlita Floataway is clad with steel for strength and durability. It can also be finished in timber, glass, plywood, Colorbond steel, or any other available cladding, while still retaining its non-sag rigidity and maximum security.

With the variety of panels, mouldings and other decorative features which can be incorporated in manufacture, the door can become a part of your home—complementing its appearance and increasing its value.

Individual custom design

Renlita doors are custom built to your exact needs... for any garage... new or existing. Whether your garage is a masonry, timber or steel-frame construction, we can manufacture and install to your complete satisfaction one of our popular doors. Let our experts measure and quote.

Renlita Floataway operates on a balance system with high tensile steel cable and balance weights. Being perfectly balanced, anyone can operate the door with incredible ease. While so light and effortless in action, the entire door and fittings are extremely strong - providing a high level of security for your car and other valuables.
